## Foreword

WITH THE enactment of the health insurance program for the aged (Medicare), it became possible for the first time to organize a continuing information system to report the use of health care services by older Americans. Since Medicare began, one of the basic tasks has been to process and pay claims for covered medical services submitted by or on behalf of the more than 19 million persons entitled to hospital insurance benefits and the 17.7 million persons enrolled for supplementary medical insurance benefits. From this operation come data on the amount, the kind, and the cost of such services used by the aged.

This report is one in a series of publications designed to disseminate such data on a regular basis. It provides detailed statistical information on home health agencies participating under Medicare. Other reports in the series will present the number and characteristics of participating hospitals, the insured population, and the utilization of medical care services. A listing of these reports appears on page vi. The reports are intended to give a comprehensive account of the amounts reimbursed under the program, the kinds of services paid for, and the variations in utili-

zation and reimbursement by age, race, and sex of the beneficiary, as well as his place of geographic residence. Such data can provide new insights into the patterns of medical care for persons aged 65 and over. A fuller understanding of present practice can contribute to improved health services not only for the aged but for the general population as well.

Many individuals in the Social Security Administration have assisted with the development of this series. The preparation of these reports is a major function of the ORS Division of Health Insurance Studies under the supervision of Howard West, director, and Aaron Krute, deputy director, and involving a majority of its staff. Important contributions for the tabulation and presentation of the statistical content of this report were made by Frank L. Kirby, Willard P. Hess, and Bonnie Sue Collins of the Statistical Processing and Procedures Branch of that division. Text preparation was the responsibility of Wayne Callahan of the Provider Statistics Branch. Special acknowledgments for publication services are made to the Division of Operating Facilities in the Office of Administration.

IDA C. MERRIAM

*Assistant Commissioner for Research and Statistics.*

DECEMBER 1969.

# The Statistical System

THIS PUBLICATION is a section of a statistical report series produced from Medicare program records. Presented on a calendar year basis, describing services rendered in the year, the series includes sections on enrollment, characteristics of providers, inpatient hospital care, outpatient hospital services, home health services, physicians' and other medical services, and overall summaries.

The primary objective of these reports is to provide data required to measure and evaluate program operation and effectiveness. Benefit payment operations furnish information about the amount and kind of hospital and medical care services used by persons aged 65 and over, as well as the expenditures for such services. The applications by hospitals, extended care facilities, home health agencies, and independent laboratories to participate in the program provide data on the characteristics of such providers of services. The claim number assigned to each individual serves as the link between the program services utilized and the demographic characteristics of each individual recorded in the health insurance entitlement master file.

The data-collection system has two inherent characteristics that determine the scope, detail, and flexibility of the available data. First, data are collected and maintained on an individual basis so that the beneficiary and his medical experience under the program form the basic unit. Second, records for each bill paid under the program and, for a sample of beneficiaries, records of diagnoses and surgical procedures are maintained on a centralized basis. Except for intermediary operating statistics such as those relating to workloads, costs, and the like, all program statistics are centrally prepared.

## THE BASIC RECORDS

The statistical system is based on five related computer-tape records: the health insurance entitlement master file, provider record, hospital insurance (part A) utilization record, medical insurance (part B) payment record, and the record containing information from medical insurance bills for a 5-percent sample of supplementary medical insurance enrollees.

## THE HEALTH INSURANCE ENTITLEMENT MASTER FILE

The health insurance entitlement master file identifies each aged person eligible for health insurance benefits and indicates whether he is entitled to hospital benefits, to supplementary medical insurance benefits, or to both of these benefits.

This record is used to create a health insurance card that is sent to each insured person. The card contains the individual's claim number (the number used for OASDI or railroad retirement programs). It indicates the entitlement of the individual for the two parts of the Medicare program.

The entitlement record provides the population data for each part of the program and therefore serves as the base for the computation of a variety of utilization rates, limited only by its demographic content.

## PROVIDER RECORD

Every hospital, home health agency, extended care facility, and independent laboratory must apply for participation in the hospital insurance program in order to be reimbursed for services provided. Data included on the application forms have been recorded in the central provider record and are updated as facilities are recertified periodically, as new ones apply for participation, or as some leave the program. When the information in this provider file is combined with utilization data, it serves to relate the characteristics of facilities and agencies that provide care to the kinds and amounts of service used by persons insured under Medicare.

## UTILIZATION RECORD FOR HOSPITAL INSURANCE

The administration of the hospital insurance program requires that two items of information be known about each person at the time of his admission to a hospital—his entitlement under the program and the extent to which he has used the benefits available to him under the "benefit period" concept.

When the patient is admitted to a hospital, the admission section of the inpatient hospital admission and billing form is completed by the hospital and forwarded through its intermediary to the Social Security Administration for recording in the central record. As soon as the record is checked, normally in less than 24 hours, the intermediary is informed of the patient's benefit status and of the number of days remaining during the "benefit period."

This information is then forwarded to the hospital. At discharge, the hospital completes the billing section of the form and sends it to the intermediary for payment. When approval for payment has been made, the intermediary forwards the claim to the Social Security Administration for inclusion in the central record.

As part of this process, information on diagnoses and surgical procedures are coded for a 20-percent

## of the Medicare Program

sample of beneficiaries based on specific combinations of digits in the health insurance claim number. Copies of admission and billing forms are handled in a comparable manner by home health agencies and extended care facilities. The outpatient billing form is also transmitted to the Social Security Administration for recording in the central record after the bill is approved for payment by the intermediary.

All the information on utilization experience in hospital and extended care facilities that is needed to administer the "benefit period" provision is recorded in the central record. This information includes stays in certain nonparticipating institutions that meet the definition of a hospital or extended care facility under the law, and days of care not covered or reimbursable under the program.

Each admission and billing form contains both the beneficiary's claim number and the provider's identification number. The resulting tape record can be readily matched to the beneficiary files and the provider files. By this process, a statistical tape record is created for the sample of insured persons that contains all the available information needed for tabulation from the three files related to Part A utilization.

### PAYMENT FOR MEDICAL INSURANCE

Payment or reimbursement under the SMI program is made only after receipt by the carriers (intermediaries involved in Part B of the Medicare program) of bills having allowed charges exceeding \$50 during a calendar year period.

For the insured population, carriers need to know from a central source that the deductible has been met; thereafter, during the remainder of the calendar year, the only additional information required from the Social Security Administration for reimbursement or payment purposes is whether the person is still enrolled under the SMI program.

For administration and operation of the program, the Social Security Administration must have accurate and complete information on the amounts paid by the carriers for physician services and for other services and supplies under this part of the program. To meet these needs, carriers furnish a payment record consisting of tape, punched card, or other machine-readable record of each bill paid. A "bill" is defined as a request for payment from or on behalf of a beneficiary as the result of services provided by a single physician or supplier.

The payment record also contains selected items of information needed to supply an efficient basis for drawing samples of the bills. These items provide a

sampling frame that may be used to draw additional samples designed to obtain specific information not furnished reliably by the basic sample of enrolled persons under the medical insurance program.

### THE MEDICAL INSURANCE SAMPLE

Although the payment record provides a rapid method for summarizing payment data and a sampling frame for efficiently drawing additional samples of bills, it does not provide specific data on diagnoses, procedures, and related charges.

Basic statistics on the utilization of physician and other services covered under the supplementary medical insurance program are derived from bills paid by intermediaries to or on behalf of a continuous 5-percent sample of all enrolled persons. Intermediaries have been given specific combinations of digits of the health insurance claim number to be used in selecting the 5-percent sample, which is a sub-sample of the 20-percent sample used for hospital insurance program data.

Bills are submitted either directly on an SSA request for payment form, or on the SSA form in combination with the physician's billing form. Both methods are designed to provide information on the date and place of each service, the procedure carried out or service provided, the condition treated (diagnosis), and the physician's or supplier's charge for the specific service.

All of the bills of persons in the 5-percent sample to or for whom payment is made under the program, including those used to meet the annual \$50 deductible, are included in the sample and coded. However, data are not available through these procedures for persons in the sample who do not meet the \$50 deductible. Such data are collected by means of the Current Medicare Survey, with data made available in a separate report series.<sup>1</sup>

For hospital-based physicians who have authorized the provider to collect the fee for their services, the provider billing for patient services by physicians form is used. This form is completed for each patient. It includes descriptive information on the date and place of each service, the diagnoses, procedures, and the charges. These bills are received centrally for the 5-percent sample of persons enrolled for supplementary medical insurance.

## Home Health Agencies Participating in the Program

TITLE XVIII of the Social Security Act, introduced as part of the 1965 amendments, provides health insurance protection for the aged. To implement the law, two separate but complementary programs were established. The first of these, the hospital insurance (HI) program, provides protection against the cost of hospital and related post-hospital care. The second, termed supplementary medical insurance (SMI), provides coverage of physicians' services and a number of other health items and services not included under the HI program. Both programs cover services provided by home health agencies. These agencies include visiting nurse associations, subdivisions of State or local health departments or other State or local departments, combinations of visiting nurse associations and local health departments, and home care divisions of hospitals or other health care institutions offering home health services.

A home health agency is a public agency or private

organization or a subdivision of such an agency or organization that is primarily engaged in providing skilled nursing and other therapeutic services.<sup>1</sup> This report presents selected data on the number, type, and location of agencies providing home health services under Medicare at any time in the period July-December 1966, as well as the kinds of services provided.

By the end of December 1966, 1,850 home health agencies had been certified to participate in the Medicare program. Certifications that providers meet the conditions for participation are made to the Secretary of Health, Education, and Welfare by State agencies selected for this purpose. A participating provider is a certified facility that has entered into an agreement with the Social Security Administration not to charge for covered items and services, except deductible and coinsurance amounts, where applicable, and to provide services on a nondiscriminatory basis in compliance with title VI of the Civil Rights Act of 1964.

### Characteristics of the Agencies

#### TYPE AND GEOGRAPHIC DISTRIBUTION OF FACILITIES

The overwhelming majority of participating home health agencies are either official health agencies, that is, agencies administered by State or local health departments, or visiting nurse associations (table A). Official health agencies accounted for 58 percent of the 1,850 participating agencies in 1966, and visiting nurse associations represented an additional 28 percent of the total. These two types of agencies have traditionally provided the bulk of home health services. Hospital-based programs, which represented only 7 percent of all participating agencies, are a comparatively recent development in the field of home health care.

There are geographic differences by type of participating agency. Visiting nurse associations made up 72 percent of all home health agencies in New England, compared with 3 percent in the West South Central States. In contrast, 22 percent of the agencies in New England were official health agencies, while 95 percent of the agencies in the South Central States were administered by State or local health departments.

In only three geographic divisions did hospital-based programs represent more than 10 percent of the participating agencies in the program—the Middle Atlantic States, with 19 percent; the West North Central States, with 17 percent; and the Mountain States, with 13 percent.

In seven States, the State health department originally elected to participate as a single statewide agency. Technically, each of these health departments constitutes one home health agency. To measure the availability of services with greater geographic precision, however, each individual local unit in these States has been identified and counted separately. The number of sub-units of statewide agencies counted in this way are: Alabama, 34 counties; Arkansas, 69 counties; Louisiana, 47 parishes; Oklahoma, 43 counties; Pennsylvania, 44 counties; South Carolina, 36 counties; and Virginia, 128 counties and independent cities.

Comparing the distribution of facilities and of per-

sons enrolled in the hospital insurance program provides a rough measure of the geographic differences in the availability of services of home health agencies (table B). It is recognized that the agencies vary considerably in the range of services provided and the number of patients served. Even without consideration of these factors, it seems clear that there are wide variations in the availability of home health agencies in the Nation. Almost one-fifth (18.4 percent) of the

agencies, but only 6.5 percent of the hospital insurance enrollees, are located in New England. In the Pacific States, however, the opposite is true—only 7.5 percent of the agencies are located in this area, compared with almost 12 percent of the enrollees.

#### AVAILABLE HOME HEALTH SERVICES

The lack of homogeneity among all home health agencies is a noteworthy characteristic of these providers of services. Agencies differ greatly, for example, in the number and variety of services offered. At one end of the spectrum are agencies that provide primarily intermittent or part-time nursing service and one or more other therapeutic services to the housebound. At the other end are agencies providing comprehensive home care programs that coordinate under a central administration the provision of medical, nursing, social, and other services in the home for the patient with multiple medical and paramedical needs. Some of these programs limit admission to very ill or seriously handicapped persons; others admit less seriously ill persons who need only one or two types of service.

To participate in the health insurance program, each of the 1,850 home health agencies certified in the period had to offer skilled nursing care and at least one other therapeutic service. There are 10 identifiable types of service available from home health agencies in addition to skilled nursing care (table C).<sup>2</sup> Over 70 percent of the participating agencies provided physical therapy; services of home health aides were available from 44 percent of the agencies. Close to 20 percent of the participating agencies provided nutritional guidance, medical appliances and equipment, medical social services, and speech therapy.

There is also a large amount of variation in the type of services available in individual States. For example, physical therapy services, available from 72 percent of the participating agencies nationally, are offered in each of the 12 agencies in North Carolina

<sup>2</sup> See "Provisions of the Law," page xvii.

but by none of the seven agencies in Wyoming. Comparable differences in the availability of services (other than nursing care) may be found for all of the other nine types of services.

Table D shows the distribution of the States and territories with at least one participating home health agency (neither Alaska, American Samoa nor Puerto Rico have a participating agency) according to the

relative availability of specified services. There are four States where physical therapy is available in less than 20 percent of the participating agencies. In 21 States, by contrast, 80 percent or more of the agencies offer this service. Except for physical therapy and the services of home health aides, in nearly all the States each of the home health services specified is available in less than two-fifths of the agencies participating.

Table D.—Number and percentage distribution of 52 areas, by percent of agencies offering specified services, 1966 <sup>1</sup>

## Conditions of Participation

The following material is excerpted from the Code of Federal Regulations, Title 20, Chapter III, Part 405, "Conditions of Participation: Home Health Agencies" (HIR-12), Social Security Administration, 1968.

*Definition of home health agency.*—As noted earlier, a home health agency under the health insurance program for the aged must be a public agency or private organization or a subdivision of such an agency or organization that is primarily engaged in providing skilled nursing and other therapeutic services. It must also have policies established by an advisory group of professional personnel (including at least one physician and one registered nurse) to govern and supervise the services it provides, and it must maintain clinical records on all patients. In the case of an agency or organization in any State in which State or applicable local law provides for the licensing of agencies or organizations of this type, the agency must be licensed pursuant to such law, or be approved by the licensing agency of the State or locality as meeting the standards established for licensing home health agencies. In addition, the agency must meet such other conditions of participation as the Secretary of Health, Education, and Welfare may find necessary in the interest of the health and safety of individuals who are furnished services by such agency or organization.

Private organizations that are not nonprofit groups exempt from Federal income taxation under section 501 of the Internal Revenue Code of 1954 may not be considered to be home health agencies unless they are licensed under State law and meet additional standards and requirements prescribed in the regulations. Under the hospital insurance program only, an agency that provides care and treatment primarily of patients with mental diseases cannot be considered a home health agency.

The Secretary may, at the request of a State, establish higher health and safety requirements for agencies in that State than in other States. Where a State or political subdivision establishes higher re-

quirements for home health agencies as a condition for the purchase of services under title I, XVI, or XIX of the Social Security Act, the same requirements must be applied under Medicare.

All home health agencies must also comply with the requirements of title VI of the Civil Rights Act of 1964. This Act provides that no person, on the ground of race, color, or national origin shall be excluded from participation in, be denied the benefits of, or be subject to discrimination under any program or activity receiving Federal financial assistance.

*Certification of home health agencies.*—Agencies that wish to participate under the Medicare program must apply for and establish their eligibility to do so. The agency must demonstrate that it meets the specific statutory requirements described above and is in substantial compliance with the additional conditions of participation prescribed by the Secretary of Health, Education, and Welfare.

Title XVIII of the Social Security Act provides that State agencies, operating under agreements with the Secretary, will determine whether prospective home health agencies meet the conditions of participation. These State agencies certify to the Secretary of Health, Education, and Welfare those home health agencies that they find to be in substantial compliance with the conditions. On the basis of such certification from the State agency, the Secretary determines whether or not a home health agency may participate in the health insurance program as a provider of services. Agencies that wish to participate and have met the requirements for certification must enter into an agreement with SSA not to charge beneficiaries for covered items and services, to return any money collected incorrectly, and to comply with title VI of the Civil Rights Act of 1964 by providing services on a nondiscriminatory basis.

State agencies must show that the home health agency meets the specific statutory requirements and is found to be operating in accordance with all other

conditions of participation with no significant deficiencies. Agencies that have deficiencies with respect to one or more other conditions of participation may still be certified if they are making reasonable plans and efforts to correct them, and are rendering adequate care that does not adversely affect the health and safety of beneficiaries being provided services.

Notice of determination of eligibility or noneligibility made by the HEW Secretary on the basis of a State agency recommendation is sent to the home health agency by SSA after such review and professional consultation with the Public Health Service as may be required. If it is determined that the home health agency does not comply with the conditions of participation, the home health agency may appeal from such determination and request a hearing.

Where, by reason of isolated location, the denial of certification of a home health agency to participate in Medicare seriously limits the availability of home health services to beneficiaries, a home health agency may, upon recommendation by the State agency, still be approved by the Secretary as a provider of services. Such approvals are granted only where there are no deficiencies of such character and seriousness as to place health and safety of individuals in jeopardy. A home health agency receiving this special *limited access* approval must furnish information showing the extent to which it is making the best use of its resources to improve its quality of care.

All initial certifications by the State agency to the effect that a home health agency is in substantial compliance with the conditions of participation are for a period of 2 years, which began July 1, 1966, or, if later, with the date on which the home health agency was first found to be in substantial compliance with the conditions. State agencies then visit or resurvey home health agencies where necessary to ascertain continued compliance. A State finding and certification to the Secretary that an agency is no longer in compliance may occur within a 2-year or subsequent period of certification and thereby terminates the State's certification as to compliance. Agencies certified on a *limited access* basis are resurveyed at least annually.

*Home health services.*—The primary functions of the home health agency include the provision of skilled nursing services and other therapeutic services on a visiting basis in a place of residence used as the beneficiary's home. In addition to skilled nursing services, the agency must provide at least one other therapeutic service such as physical therapy, speech therapy, occupational therapy, medical social services, or home health aide services. Further, the agency must designate a physician or registered professional nurse to supervise the agency's performance in providing these services in accordance with the orders of the physician responsible for the care of the patient and under a plan of treatment established by this physician. In cases where a public or voluntary nonprofit health agency provides directly either only skilled

nursing services or only other therapeutic services, evidence must be shown that it furnishes the services that it does not directly provide through arrangements with other public or voluntary nonprofit agencies.

Services covered under both programs, whether provided by the home health agency or by others under arrangements with the home health agency, include intermittent nursing care; physical, occupational, and/or speech therapy; and other related home health services furnished by visiting nurse agencies, public agencies, facility based home health programs, and similar agencies. While the home health patient is expected to be housebound to be eligible for the services to be covered, provision is made for the patient to receive services in a hospital, extended care facility, rehabilitation center, and the like, where the service requires the use of nontransportable equipment and the home health agency assumes the responsibility for arranging and billing for such services. If such services are administered at a rehabilitation center that is not participating in the program as a hospital or home health agency, the rehabilitation center must meet all applicable State and local legal requirements for health and safety.

*The plan for services.*—Services from the home health agency may be furnished to an individual only while he is under the care of a physician. This physician may be the patient's private physician, a physician on the staff of the home health agency, a physician working under an arrangement with the institution that is the patient's residence or, if the agency is hospital-based, a physician on the hospital or agency staff. The attending physician establishes the plan of treatment, certifies to the necessity for home health services, and periodically reviews the plan relating the services to the patient's condition. A plan is "established" when it is reduced to writing by the physician and is made available to the home health agency that has accepted the patient as a client. The plan specifies the types of services required, and as far as possible provides a long-range forecast of likely changes in the patient's condition. It includes the diagnosis, when and what nursing services are needed, the drugs and medications expected to be used, the patient's diet, permitted activities, rehabilitation, therapy required, medical social services needed, home health aide services needed, and supplies and appliances to be used.

The plan is signed by the attending physician and incorporated into the agency's permanent record for the patient. Changes are required to be made in writing and signed by the physician or by a registered professional nurse on the staff of the agency pursuant to the physician's verbal orders. All changes in orders for dangerous drugs and narcotics are required to be signed by the physician.

The plan is reviewed by the attending physician, in consultation with agency professional personnel, at such intervals as the severity of the patient's illness requires but at least every 2 months.

## Source of the Data

Each home health agency seeking to establish eligibility for participation in the health insurance program submits a completed "Request to Establish Eligibility" (Form SSA-1515, figure 1) through the State agency and the regional office of the Social Security Administration to the central office. The data on this form, and that on the "Certification and Transmittal" (Form SSA-1539, figure 2), are the sources for the information shown in the general tables.

Upon receipt of these forms in the Social Security Administration's central office, the information describing the characteristics of the home health agency is entered into a master provider of service file for storage and retrieval. This provider record is updated as agencies are periodically recertified, as new agencies apply and are accepted for participation, or as some leave the program. The detailed information about each provider recorded in the statistical tapes includes such items as the State and county in which the agency is located, type of home health agency, and types of services provided.

### TYPE OF AGENCY

The several different kinds of home health agencies most commonly participating under the Medicare program are defined below.

*Visiting nurse association:* A voluntary, non-official agency administered by a citizens' group, usually supported by earnings and/or contributions.

*Combination government and voluntary agency:* An agency jointly administered by a voluntary group and a government agency, and supported by both tax funds and contributions. Such a home health agency is usually one jointly administered by a State or local health department and a visiting nurse association.

*Official health agency:* An agency administered by a State, county, or other local unit of government, supported by tax funds.

*Hospital-based agency:* An agency administered by a hospital, supported by taxes and/or community funds.

*Other agencies:* Groups other than visiting nurse associations, combination government and voluntary agencies, official health agencies, or hospital-based agencies, that administer organized programs. Such agencies might include those that are rehabilitation facility-based, extended care facility-based, industrial, proprietary, or other home care programs.

### TYPES OF REIMBURSABLE SERVICES

The types of reimbursable services<sup>3</sup> are defined in the following paragraphs.

<sup>3</sup> For a complete description of the standards of qualification for the various service disciplines, see sections 405.1228-405.1234 of the Code of Federal Regulations, Title 20, Chapter III, Part 405, "Conditions of Participation: Home Health Agencies" (HIR-12), Social Security Administration, September 1968.

*Skilled nursing service:* Professional nursing service provided by or under the supervision of a registered professional nurse, currently licensed by the State, in accordance with the orders of a physician.

*Physical therapy:* Service provided by or under the supervision of a qualified physical therapist in accordance with a physician's orders. A qualified physical therapist is a graduate of a program in physical therapy approved by the Council on Medical Education of the American Medical Association in collaboration with the American Physical Therapy Association, or one who has had equivalent training. When applicable, the therapist is licensed or registered by the State.

*Speech therapy:* Speech pathology or audiology provided by or under the supervision of a qualified speech therapist in accordance with a physician's orders. A qualified speech therapist is a person who has been certified by the American Speech and Hearing Association, or one who has completed the academic requirements and is in the process of accumulating the necessary supervised work experience needed for such certification.

*Occupational therapy:* Service provided by or under the supervision of a qualified occupational therapist in accordance with a physician's orders. A qualified occupational therapist is one who is registered by the American Occupational Therapy Association or who has been graduated from a program in such therapy approved by the Council on Medical Education of the American Medical Association in collaboration with the American Occupational Therapy Association.

*Medical social services:* Services provided by or under the supervision of a qualified medical social worker in accordance with a physician's orders. Qualified medical social workers are graduates of a school of social work accredited by the Council of Social Work Education and have had social work experience in a hospital, outpatient clinic, medical rehabilitation, or medical care program.

*Home health aide services:* Services directed toward the personal care of the patient provided under the supervision of a registered professional nurse, or, if appropriate, a physical, speech, or occupational therapist in accordance with the orders of a physician.

*Services of interns and residents:* Medical services provided by interns and residents-in-training, which under an approved hospital teaching program may be reimbursed, provided the home health agency is affiliated or under common control of a hospital with an approved teaching program.

*Appliances and equipment:* Medical appliances and items of equipment (except drugs and biologicals) owned or rented by the home health agency and required by the patient to facilitate his treatment and rehabilitation.

SOCIAL SECURITY ADMINISTRATION

# HOME HEALTH AGENCY REQUEST TO ESTABLISH ELIGIBILITY IN THE HEALTH INSURANCE FOR THE AGED PROGRAM

All home health agencies desiring to establish their eligibility in the health insurance program should complete this form and return it to the State agency that is handling the certification process. If a return envelope is not provided, the name and address of the State agency may be obtained from the nearest Social Security Administration district office.

SUBMISSION OF THIS FORM AND ESTABLISHING ELIGIBILITY DOES NOT OBLIGATE A HOME HEALTH AGENCY TO PARTICIPATE. AN AGREEMENT WILL BE MADE AVAILABLE BY THE SOCIAL SECURITY ADMINISTRATION AT A LATER DATE TO HOME HEALTH AGENCIES WHO HAVE ESTABLISHED ELIGIBILITY. THERE IS NO COMMITMENT UNTIL THE AGREEMENT IS SIGNED.

# Provisions of the Law

THE HEALTH INSURANCE program for the aged, commonly called Medicare, was enacted on July 30, 1965 as title XVIII of the Social Security Act, and became effective on July 1, 1966. The program, a part of the 1965 amendments (Public Law 89-97), makes avail-

able two separate but coordinated insurance coverages—hospital insurance, covering nearly all persons aged 65 and over, and supplementary medical insurance, covering those persons in this age group who enroll voluntarily and pay the required premium.

## Hospital Insurance Program

The hospital insurance program (Part A of Medicare) pays for a large portion of the costs of hospital and related post-hospital services. It is financed on a self-supporting basis through a tax on a portion of current earnings, paid by employees, employers, and self-employed persons. The proceeds of this tax are placed in a Hospital Insurance Trust Fund from which reimbursements for benefits and administrative expenses incurred under the program are paid. The trust fund is reimbursed from general tax revenues for the costs of providing coverage for persons who qualify for hospital insurance but are not eligible for monthly social security or railroad retirement benefits.

### BENEFITS

The program covers the cost of covered services in a participating hospital for up to 90 days in a "benefit period" (period beginning with the first day of hospitalization and ending 60 days after discharge from a hospital or an extended care facility). Of the 90 days, full payment is made by the program for the first 60 days of hospitalization after a deductible of \$40 has been paid. For each of the remaining 30 days in the benefit period, the patient pays a coinsurance amount of \$10 a day. The program provides the same benefits for services rendered in a nonparticipating hospital during a medical emergency.

Inpatient tuberculosis and psychiatric hospital services are also covered. However, there is a lifetime limit of 190 days of care in a psychiatric hospital. Where an individual is a patient in a tuberculosis or psychiatric hospital at the time he becomes entitled to hospital insurance, the number of days he was such an inpatient in the 90-day period immediately prior to

his eligibility are counted against his 90 days of entitlement in that benefit period.

Covered hospital services include hospital room and board in accommodations containing from two to four beds, nursing services except for private-duty nursing, drugs and biologicals, and all those services ordinarily furnished by a hospital to its inpatients. Coverage under the hospital insurance program does not include the services of physicians (including radiologists, anesthesiologists, pathologists, and physiatrists) except for those services provided by interns or residents in training under approved hospital teaching programs.

The cost of the first three pints of blood furnished a patient during a benefit period is a deductible amount, unless the patient arranges for replacement. Any additional blood furnished is a covered charge under the program.

*Outpatient hospital diagnostic benefits.*—These benefits cover the cost of tests and related services that are ordinarily furnished by a participating hospital to its outpatients for the purpose of diagnostic study. Such services are covered subject to a \$20 deductible and 20 percent coinsurance for diagnostic services furnished the beneficiary by the same hospital during a 20-day period.

*Post-hospital home health care benefits.*—These benefits cover the cost of visiting nurse services and related home health services for as many as 100 visits in a year following the patient's discharge from a hospital or extended care facility, provided he has been confined for at least 3 days in a hospital. A home health plan must be developed by a physician and implemented within 14 days after the patient's discharge from the hospital or extended care facility.

## Supplementary Medical Insurance Program

This program (Part B of Medicare) provides coverage of physicians' services, additional home health services, and a variety of other health services. Individuals 65 years of age and over may enroll in the program regardless of whether they are social security beneficiaries. The insureds' monthly premiums are matched by the Federal Government and paid into the Supplementary Medical Insurance Trust Fund, which reimburses intermediaries for benefits and administrative expenses incurred under the program.

### BENEFITS

The SMI program pays for 80 percent of the allowed charges for physician services and other medical services after the patient has met a deductible of \$50 during a calendar year. The only dollar limit is that for treatment of mental illness outside a hospital, the maximum payment in any year, after the \$50 deductible has been met, being the lesser of \$250 or 50 percent of the allowed charges. To preclude the possibility of having to meet a deductible twice in a short

period of time, a “carryover” provision was instituted. Accordingly, covered expenses that are incurred in the last quarter of the year and counted toward the deductible in that year are also credited toward the deductible for the following year.

Covered under the program are such benefits as physicians’ services, including home, hospital, and office visits; services and supplies, including drugs and biologicals that cannot be self-administered, that are furnished as a part of a physician’s professional service, most commonly in his office, and either rendered without charge or included in the physician’s bills; diagnostic X-ray tests, diagnostic laboratory tests, and other diagnostic tests; X-ray, radium, and radioactive isotope therapy, including materials and the services of technicians; surgical dressings, splints,

casts, and other devices used for reduction of fractures and dislocations; rental of durable medical equipment, including iron lungs, oxygen tents, hospital beds, and wheelchairs used in the patient’s home (including an institution used as his home); ambulance service in cases where the use of other methods of transportation is contraindicated by the individual’s condition; prosthetic devices (other than dental) that replace all or part of an internal organ, including replacement of such devices; leg, arm, back, and neck braces, and artificial legs, arms, eyes, including replacement if required because of a change in the patient’s physical condition; and 100 home health visits during a calendar year—these visits being independent of those provided under the hospital insurance program.

## Eligibility

*The hospital insurance program.*—Almost all persons aged 65 and over are eligible for benefits under the hospital insurance program. Included are those persons in this age group who are entitled to monthly social security cash benefits or payments from the railroad retirement system, regardless of whether they have applied for these cash benefits. During the period under consideration, a person was eligible for hospital insurance protection even though he did not qualify for either social security cash benefits or a railroad retirement annuity if (1) he had attained age 65 by July 1, 1966, (2) he would become 65 years of age before 1968, or (3) he would attain age 65 after 1967 with not less than 3 quarters of social security coverage, whenever acquired, for each calendar year elapsing after 1965 and before the year in which he would attain age 65; however, hospital insurance protection could not go into effect until the individual attained age 65. These three classes of individuals were “deemed insured” under a special transitional provision.

Federal employees who retired from the Federal Service after July 1, 1960, and who had the opportunity to be covered under the Federal Employees Health Benefits Act of 1959, are ineligible for hospital insurance benefits, as are aliens with less than 5 years of continuous residence in the United States, and those persons convicted of crimes against the security of the United States.

Hospital insurance protection can be retroactive for as many as 12 months from the time an individual files his application for enrollment. For example, an individual may apply 11 months after he attains age 65 and still be entitled to benefits from the month he attained age 65.

*Supplementary medical insurance.*—Persons entitled to benefits under the hospital insurance program (Part A) and retired Federal employees who are not eligible for those benefits may voluntarily participate in the supplementary medical insurance program.

*Enrollment.*—An eligible person may enroll during the initial enrollment period, which begins with the third month preceding the one in which an individual attains age 65 and ends 3 months later, a total period of 7 months. If he enrolls during the 3 months prior to the month in which he attains age 65, his coverage is effective with the month in which he attains age 65; if he enrolls during the month he attains age 65, his coverage begins the following month; if he enrolls in any of the 3 months after he attains age 65, his coverage begins from 2 to 3 months after enrollment, depending on how long he waited before enrolling.

A general enrollment period was set between October 1 and December 31, 1967 for those who did not enroll in the regular enrollment period, with comparable periods set to occur in every odd-numbered year. A person who enrolls during a general enrollment period may receive benefits starting on the first of July following the general enrollment period. An eligible individual must enroll within 3 years after the close of the first enrollment period in which he was entitled to enroll in order to become a beneficiary.

An initial general enrollment period was set up at the beginning of the program for people who had attained age 65 before March 1, 1966. This enrollment period began September 1, 1965 and ended on May 31, 1966 for coverage to begin with the initiation of the program on July 1, 1966.

A State may enroll otherwise eligible individuals who receive cash payments under public assistance programs if the State requests such a State-Federal enrollment agreement to be established and pays the necessary premiums.

Enrollment terminates with the month of death. In general, railroad retirement beneficiaries and individuals entitled to monthly cash social security benefits may terminate their coverage earlier by notifying the Social Security Administration in writing during a general enrollment period of the desire to withdraw from the program. Other enrolled persons may termi-

nate their coverage by withholding payment of premiums or by notifying the Social Security Administration in writing of the desire to withdraw from the program. An individual who previously has termi-

nated his enrollment may re-enroll only in a general enrollment period beginning within 3 years of the date his previous enrollment had terminated. Re-enrollment, however, is allowed only once.

# General Tables

## Notes

*Type of agency.*—See page xiv.

*Services provided.*—See page xiv.

*Geographic classifications.*—Based on the address of the agency.

*All areas:* Consists of the United States, Guam, Puerto Rico, Virgin Islands, and other outlying areas.

*United States:* Consists of the 50 States, and the District of Columbia.

*Other outlying areas:* Consists of American Samoa, the Canal Zone, Canton Island, Caroline Islands, Mariana Islands, Marshall Islands, Midway Islands, and Wake Island.

The regions and divisions of the United States follow the definitions of the Bureau of the Census:

### The Northeastern States

New England	Middle Atlantic
Maine	New York
New Hampshire	New Jersey
Vermont	Pennsylvania
Massachusetts	
Rhode Island	
Connecticut	

### The North Central States

East North Central	West North Central
Ohio	Minnesota
Indiana	Iowa
Illinois	Missouri
Michigan	North Dakota
Wisconsin	South Dakota
	Nebraska
	Kansas

### The South

South Atlantic	West Virginia
Delaware	North Carolina
Maryland	South Carolina
District of Columbia	Georgia
Virginia	Florida

### East South Central

Kentucky  
Tennessee  
Alabama  
Mississippi

### West South Central

Arkansas  
Louisiana  
Oklahoma  
Texas

### The West

#### Mountain

Montana  
Idaho  
Wyoming  
Colorado  
New Mexico  
Arizona  
Utah  
Nevada

#### Pacific

Washington  
Oregon  
California  
Alaska  
Hawaii

### Outlying areas

American Samoa	Puerto Rico
Guam	Virgin Islands

*Standard metropolitan statistical areas.*—Listed as of the end of 1966 by the Office of Statistical Standards, Bureau of the Budget, in the publication *Standard Metropolitan Statistical Areas (1967)*. Each metropolitan area is an integrated economic and social unit with a recognized large population nucleus. Each standard metropolitan statistical area must contain at least one city of at least 50,000 inhabitants. The area includes the county of such a central city and adjacent counties that are found to be metropolitan in character and economically and socially integrated with the county of the central city.

In New England an SMSA consists of towns and cities, rather than counties. However, the address of the participating agency is coded only for State and county. Therefore, for New England, the SMSA was replaced by the metropolitan State economic area, which is defined in terms of whole counties.
